

<http://forums.x-plane.org/index.php?showforum=90>

X-Plane.org has a complete set of lessons intended to teach how to fly an aircraft in X-Plane as you would in real life.

Many people have found experience in flight simulators such as X-Plane has helped with real flying later on.

We have just added a section to our flight school: X-Multi, intended to focus on the operation of Multi-Engine aircraft. More importantly, these lessons are **100% FREE**

The lessons are written by **Voidhawk9**. Voidhawk9 is a real life flight instructor in New Zealand with a ton of flying experience. He is also a true X-Plane expert. He knows everything about X-Plane, planemaker and has designed countless high-tech custom aircraft for X-Plane over the years. He is the perfect person to translate real-life aviation experience to X-Plane.

## **X-PPL - X-Plane's top VFR Flight School**

X-PPL is a tutorial series aimed at teaching you how to fly in X-plane, step by step, in much the same way as you would learn to fly a real aircraft.

X-PPL assumes little knowledge of flying, so it is suitable for beginners; useful to those with a bit more experience in furthering their skills; or as a training aid for those taking real flying lessons.

---

## **X-IFR - IFR Flight School**

X-IFR is a series of lessons is designed to take you from VFR pilot to IFR pilot, from a clear-skies flyer to a zero-zero flyer.

These lessons assume you are already familiar with basic handling techniques, as taught in the first X-PPL lessons (VFR).

---

## **X-Multi - Multi-Engine Flight School**

X-Multi will focus our multi-engine lessons on a light-twin aircraft, as these are commonly used for real-world multi-engine training, and the peculiarities of multi-engine flight are most pronounced.
